Statement

To whom it may concern,

We,

Guangzhou Wondfo Biotech Co., Ltd.

As the manufacture of the product:

Wondfo 2019-nCoV Antigen Test (Lateral Flow Method), REF: W196/W634/W633

Would like to declare that the mainly antibodies as below are used in this product,

No.	Material Name	Cat.	Material performance
1	2019-nCoV Nucleocapsid Antibody	COVID19-MAb30	Concentration \geq 2.0mg/mL, purity \geq 95%, Titer \geq 1 :4000
2	2019-nCoV Nucleocapsid Antibody	COVID19-MAb117	Concentration \geq 2.0mg/mL, purity \geq 95%, Titer \geq 1 :4000

And it can detect the nucleocapsid protein (NP) of SARS-CoV-2.

The 2019-nCoV variant B.1.1.529 lineage also known as Omicron. Omicron NP mutations are P13L, Δ 31-33, R203K, G204R. The epitope of our current antibody pair is not located in the Omicron mutation sites. The laboratory verification of the NP recombinant antigen of Omicron mutant strain show that the NP of Omicron can be detected.

Sincerely yours,

Guangzhou Wondfo Biotech Co., Ltd.
